

Essederm[®]

*The secret of
looking and feeling younger!*

Esse Derm®

The essence of feeling and
looking younger!

Bring back the look you have lost !

Over time, as human ages, the body's natural store of hyaluronic acid is slowly degraded and destroyed and the appearance of your skin can change resulting in wrinkles, skin folds and loss of elasticity. **Essederm** is an injectable filler that uses hyaluronic acid which combines with the water in the skin that can immediately create volume to reduce wrinkles and folds and bring back the visible and natural look.

What is hyaluronic acid?

Hyaluronic acid is a natural and essential substance that is found in all living organisms.

In skin tissue, hyaluronic acid is a jelly-like substance that fills the space between collagen and elastin fibres.

What are the benefits of Essederm?

Essederm cross linked hyaluronic acid is becoming a popular choice as a temporary filler for facial augmentation.

It is a safe, non-surgical procedure that conveniently softens facial lines, furrows, enhances lips and cheeks. It also has the added benefit of not requiring skin testing before use.

1. Worry Lines, Essederm **Thin, Medium**

Why Essederm is so different?

- Immediate and Natural aesthetic results.
- Smoother skin with visible correction.
- Gentle and long lasting.
- **Essederm** is from non-animal origin and is bio-compatible.
- No allergic reaction.
- Does not require surgery.
- Minimal recovery time.
- Less re-injections needed to continue the clinical results.
- Excellent volume effect without overcorrection.
- Easy to inject without pre-testing and virtually painless.
- No solvent, no anaesthetics nor preservatives added.
- **Essederm** provides unsurpassed purity, dramatically improved quality and safety, and exceptional consistency.
- What is the ultimate benefit? Safety. Plain and simple.

What to expect from a treatment?

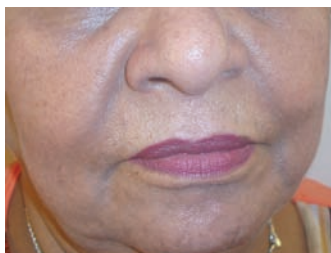

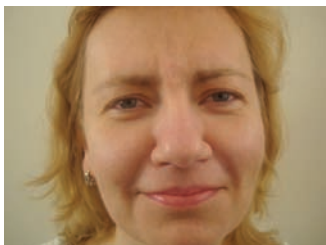

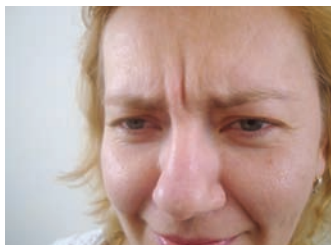

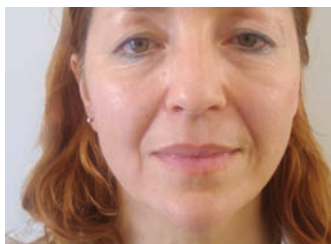

Before the treatment, your doctor may use anaesthesia to numb the area to be treated.

During the treatment, to enhance facial features, your doctor will inject **Essederm** under the skin to fill wrinkles and folds.

After the treatment, you should avoid, consumption of alcohol, extreme heat or freezing temperatures or sun for few hours.

Amazing & Natural Results

Before & After

Frequently asked Questions

How long the treatment session takes?

The actual treatment is easy and quick and will take about 15 to 30 minutes.

Who should not use **Essederm?**

Essederm products should not be used on pregnant woman or breast feeding, for more information please consult with your doctor.

What is the recovery time after a treatment?

As with all skin fillers swelling and/or redness, with or without associated pain, may occur after the injection. These generally disappear within a few hours, and in most cases will disappear completely within 24 hours and in some rare cases within a week.

How long before I see results?

The results are immediate and noticeable to the treated area.

How long does **Essederm last?**

The high quality of **Essederm** products provides slower degradation than similar products. **Essederm** products last 4 to 12 months which depends on skin type, age and the way of life of the patient as well as treated area and injection technique. It can be necessary to renew the treatment partially in order to optimize the results and durability of the correction.

Is there any recovery time after treatment?

There is a minimal downtime and most people can return to their normal lives right after a treatment.

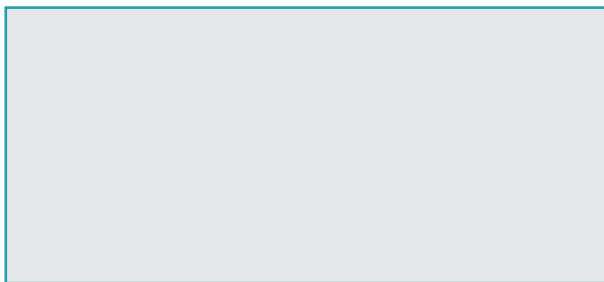

Are there any side effects?

Essederm is generally well adopted by body. Possible side effects such as redness, skin reactions, tenderness and bruising are mild and temporary.
